exLINE

STACK & AISLE LIGHT

ExLine can be mounted in continuous rows or individual units. Shown in a standard clear anodized aluminium finish. Optional painted finishes are also available.

WHAT IT IS.

The versatile **ExLine** series is an innovative new lighting system built on a rigid extruded aluminum rail that can be configured as individual units or continuous rows of infinite length. While remarkably small in scale, **ExLine** is capable of integrally housing all required ballasts as well as auxiliary equipment including emergency battery packs. Numerous available diffuser and reflector options can be mixed or matched along a common rail, further increasing the versatility of this unique lighting system.

WHAT IT DOES.

The **ExLine Stack & Aisle** Light is specifically designed for applications requiring abundant and evenly distributed illumination for vertical surfaces with low brightness when viewed from normal viewing angles.

WHERE TO USE IT.

The **ExLine Stack & Aisle** light is ideal for applications ranging from library stacks, supermarkets and record rooms to retail merchandising. It will also perform well in corridors or any other application where higher than average vertical illuminance is important.

CANDLEPOWER DISTRIBUTION
