DUAL FUNCTION PATIENT BEDLIGHT

We bring ARCHITECTURE to LIGHT!®

LATITUDE EXAM/AMBIENT BEDLIGHT

DUAL FUNCTION PATIENT BED LIGHTING

Cutting Edge Engineering

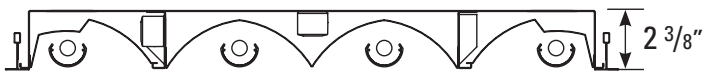

Latitude Patient Bedlights bring together the amazingly small but powerful output of T5HO lamps, along with an innovative patented composite perforated film diffuser technology and a new concept in highly efficient symmetric reflector design to create the most effective, compact and energy efficient product of its kind.

3 Distinct Modes of Operation

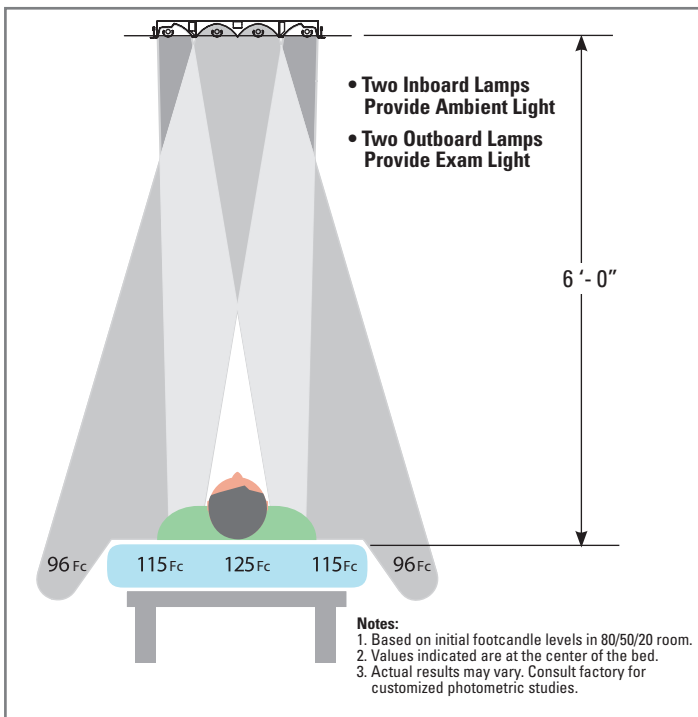

Installed over the patient bed, **Latitude's** inboard lamps reflect light off of ribbed, satin-finished reflectors, providing a soft wash of illumination that's perfect for general room illumination and reading. Separately switched outboard lamps direct crossing beams of highly focused, shadow-less examination lighting onto the patient for use by the medical staff. High-level examination lighting is achieved by switching on both lighting modes concurrently.

An Installer's Dream

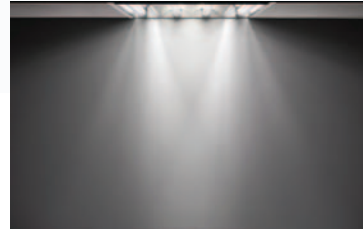

Talk to the electricians who install lighting in healthcare facilities and they'll tell you that among their biggest problems are the plethora of ducts, pipes and other obstructions in the ceiling plenum. With **Latitude's** incredibly shallow height, dealing with these costly interferences becomes a thing of the past. Consider this when estimating the cost of your next project!

Latitude's shallow depth is ideal for installation into today's cluttered ceiling plenums.

An innovative diffuser provides the proper blend of light control and visual comfort (Patent Pending).

Precision engineered reflectors provide optimal photometric performance. (Actual photo)

Together, low brightness ribbed and highly specular reflectors provide optimal performance while always maintaining patient comfort.

Optional SaniShield™ triple gasketed dust covers enhance performance and serviceability.

Latitude Exam / Ambient's multifunctional performance is ideally suited to exam rooms, procedure rooms, and patient bedrooms.
